

Overview :

We have a range of side-wall mounted fresh-air and exhaust vent caps. Our Vent caps are designed to provide an architecturally clean, louvered look that can be used for exhaust, kitchens, and bathrooms ventilation. Intakes provide fresh air supply for ventilation. Stainless steel 304 is used, and round inserts have stainless steel clips to securely fit into round air duct-works, which make them all easy to install.

Round View Type :

This model has a round connection louvered look with a mesh screen. The eyebrow stops at center line of the circle. Polished Stainless Steel 304 is used. It is removable and easy to clean. Rain falls down and away from the access opening. The RECL model is louvered. The RECM model is provided with a meshed screen.

Square View Type :

This model has a round connection with a standard Square look. The eyebrow covers the opening. This model has a quiet open-and-shut back-draft damper that prevents outside air backing into the ventilation exhauste. The Square view model can be ordered without a damper and can be used for supply of outside air.

Accessories :

Vent Flashing, Side Wall Type

Vent Clean out door.

Installed in the round air duct. Cut.Access door size and insert door opening.

Handles for removing the door

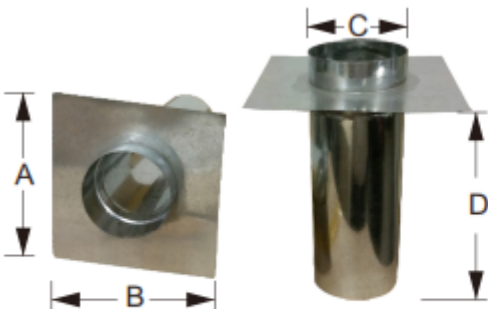

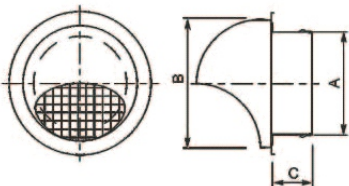

Require no tools.
